

USE WPC.  
Save trees. Save earth.

## WPC GAZEBO – A luxurious outdoor seating for gardens and terraces.

Gazebos are typically a pavilion structure that was popularly used by kings as 'Tents' or 'Shelters' during their long travels. A dome shaped Gazebo is a well-designed outdoor seating in gardens, terraces, hotels, clubs, temples and resorts. It gives ancient look to the viewer and user. Conventionally it was being made out of natural wood in solid panels. Wood was used to cut into desired shapes and sizes, fixed with nails and screws. Later it was painted or varnished for saving wood from moisture and temperature. Wood needs a regular maintenance when used outdoor. It gets affected because of several reasons like termite, borer, water, moisture, sunlight, cold waves etc. it needs to be regularly painted or varnished or coated to protect it from such issues.

Gazebos made out of wood polymer composite material is a self-sustained or self-maintained structure which doesn't get affected with termite and outdoor weather. It can be installed faster than conventional wood with assembly and hardware available. It can be made with different colours and finishes. It can be floored with WPC Deck floors and WPC fencing profiles for master outlay. HARDY SMITH has installed a full size gazebo with total WPC materials at a terrace near Riverfront, Ahmedabad. Giving the same look of wooden structure it has saved almost 'Four virgin Trees'.

Site: Nirvana, Iscon river side, Sabarmati river front, Ahmedabad.
