

HARDY SMITH™

wood plastic composite technologies

We provide technology solutions for WPC

- Hygienic • Recyclable • None Polluting • Uses wastes • Saves forests

WPC as a green material performs several important aspects as a 100% recyclable, Water proof and clean material in compare to other conventional woods and wood based panels. Manufacturing and processing of wood plastic composite is not creating pollution and entire manufacturing process is not that much complicated. For qualitative as well as non qualitative applications, WPC is anti fungus, anti borer and anti decay. Due to its improved properties about moisture, hygiene of customers and their children can be taken care well.

We recommend customers for using WPC instead of Plywood, MDF, Particle board and natural woods. WPC can be applied for Flooring and wall paneling. It can be used for external grade furniture and building aesthetics. Most important aspect of WPC in formulation is it can be made out with waste plastics and waste wood dust.

India as a country is suffering for getting quality and quantity of 'wood' that is required for furniture industry. WPC can be a great substitute at this stage for Indian furniture industry.
